SOLVING MISALIGNMENT
page 25

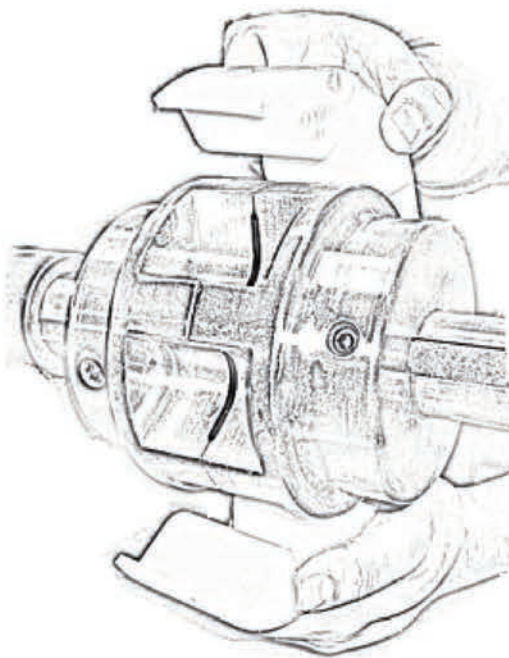

ATRA-FLEX means savings in manpower and downtime, easy installation, economy and long, trouble-free service

Now there's a new solution to one of the most persistent and troublesome problems facing maintenance personnel - periodic coupling failure and the downtime and expense that go with it. If a new insert is needed, a low-cost replacement can be installed in minutes without moving either the prime mover or the driven equipment.

There are only four parts in ATRA-FLEX couplings. The two identical hubs (number 1 and 2, right) are made of steel, each with four, six or eight teeth, depending on load and size. The split insert (number 3), which is made of specially compounded polyurethane, fits between the hubs. The outer steel holding ring (number 4) has no nuts or bolts!

Assembly and disassembly

After hubs (1) and (2) and holding ring (4) are installed on shafts, the teeth are then aligned parallel to each other, but not touching. Once installed the hubs never need to be moved again. The elastic insert (3) can then be installed in the slots formed by the parallel teeth. When the insert is in position, slide holding ring (4) onto the polyurethane insert starting, centrifugal force will expand the elastic insert to fix it tightly to the inside of the steel ring.

To disassemble, remove the ring. The insert can then be quickly and easily removed and replaced. No special tools, screws, bolts or other fasteners needed.

ATRA-FLEX® offers all these advantages

- Changeout of coupling insert is faster than any other.
- Custom compounded polyurethane inserts provide elasticity and resistance to high torque, shear and shock loads
- Unlike others, a single ATRA-FLEX coupling can be purchased to fit two different shaft sizes.
- Elastic insert is highly resistant to humidity, oils, corrosion and chemicals; retains performance characteristics at temperatures from -60°F to +250°F.
- No lubrication or service is required.
- ATRA-FLEX couplings have run 70,000 hours and more with no signs of wear.
- ATRA-FLEX couplings may be installed horizontally or vertically; can rotate in either direction.
- No bolts or sharp edges provide safer operation.
- Operation is completely silent at all speeds and loads.
- No metal-to-metal contact between coupling parts.
- Initial cost is low, and maintenance and downtime are minimal.
- High temperature insert (red) available up to +350° F.
- Melonite Process available for enhanced corrosion and wear resistance. Low cost alternative to stainless steel.

1) Determine service factor (SF)
SF = F1 X F2 (not to exceed 4)

DRIVER F1	SF
ELECTRIC MOTOR	1.0
GAS OR STEAM TURBINE	1.0
GEAR BOX INCREASER / REDUCER	1.0
GAS OR DIESEL ENGINE 4+ CYL	3.0
GAS OR DIESEL ENGINE 1-3 CYL	4.0

2) Calculate required coupling continuous torque rating (lb-in) using the formula: HP X SF X 63025 ÷ RPM = Torque (lb-in)

DRIVER F2	SF
GENERATORS, GEAR BOXES, LIGHT DUTY AGITATORS & CONVEYERS, STOKERS	1.0
CENTRIFUGAL PUMPS, COMPRESSORS, BLOWERS, FANS, ETC.	1.0
RECIPROCATING PUMPS, COMPRESSORS, FEEDERS, FREQUENT STOPS/STARTS, ETC.	2.0
PULP & PAPER MILL EQUIPMENT (REFER TO MILL STANDARD COUPLING SF GUIDE)	1-3
STEEL MILL EQUIPMENT (REFER TO MILL STANDARD COUPLING SF GUIDE)	1-3

3) Determine suitable coupling insert type for application using the Insert Color Chart below

INSERT TYPE	DESCRIPTION	USE	MAX TEMP °F	MIN TEMP °F	DUROMETER
YELLOW	GENERAL USE, HIGH DAMPEN	GENERAL APPLICATIONS (STANDARD)	250	-60	60 D
RED	HIGH TEMPERATURE, HIGH DAMPEN	HIGH TEMPERATURE RUNNING APPLICATIONS	350	20	90 A
ORANGE	HIGH TORQUE, MEDIUM DAMPEN	HIGH TORQUE, LOW SPEED APPLICATIONS	250	-20	70 D
GREEN	EXTRA HIGH DAMPENING	ENGINE OR RECIPROCATING WITH HIGH VIBRATORY TORQUES	250	-60	90 A

4) Choose the coupling size that meets or exceeds the calculated required continuous torque rating using the color coded tables below. Intermittent (peak) ratings are reserved for system torque spikes, starts/stops, reversing etc.

Insert Tables: Torque ratings (lb-in) - HP ratings @ various RPMs - Max RPM's based on insert types

5) Determine coupling type required for the application. Check dimensions/max bore tables to confirm the coupling sized will accommodate shafts and physically fit the application. Determine if the couplings hubs will be bored to size, or used with Taper Lock Bushings, QD Bushings, or other type of locking device. Standard couplings are machined carbon steel. Specify if stainless steel or Melonite Process is required based on atmosphere conditions, etc.

Listed service factors are intended as a general guide, and are typical of usual service requirements. Please refer to AGMA 922-A96: Load Classification and Service Factors for Flexible Couplings for a complete list.

ATRA-FLEX® Millennium®
Non Spacer Couplings

- Detect and Lock-On Ring Feature
- "Internal Support" of Insert for Higher Horse Power
- Higher Horse Power in a Smaller Package
- Larger Bore Capacity
- No Exposed Shaft on Spacer Coupling
- Very Economical

*Limited End Float Couplings available please see LEF page

CUSTOM LENGTHS AVAILABLE WITH EXTRA CHARGE

DROP OUT SPACER COUPLINGS TO CONVERT YOUR GREASE LUBRICATED GRID SPACER COUPLING TO A LOW MAINTENANCE ATRA-FLEX COUPLING AVAILABLE

NOTE: Use Table 2 (page 4) Horsepower Capacity at Various RPM.

For Sleeve Bearing Motors, And All Other Applications Requiring Axial End-Float Restrictions

(Meets API 610 Standards Maximum Coupling End Float Requirements)

FIGURE 5
 LIMITED END FLOAT

***Available in A-Series**
Consult factory for sizes

Use Limited End Float Hubs and Inserts for applications with Sleeve Bearing Motors, ID & FD fans or any application requiring Limited Axial End Float. All Other components are standard, they can be used in Non-Spacer, Spacer, and Flywheel, etc.

Note: Limited End Float Couplings can be special ordered for End Float +/- increase or decrease and accommodate greater angular misalignment.

Application Range: Coupling sizes available to transmit torque loads from 60 in/lbs to over 1.57 million in/lbs with shaft capacities ranging from .375 to over 20.00 running from low rpm to over 18,000 rpm.

Coupling Types: Close coupled, Spacer types, Limited End Float, Slide, Floating Shaft, Flywheel, Brake Wheel, Brake Disc, and made to order engineered couplings.

How it works: T-Flex close coupled couplings consist of four parts. The Ring Hub (1), Flex Hub (2), Insert (3), and Drive Ring (4). The Ring Hub and Flex Hub are installed on the shafts with the Drive Ring fitting over the Flex Hub. After coupling alignment, the Insert is placed around the Flex Hub engaging the bottom lobes of the Insert. The Drive Ring is then fitted over the Insert engaging the top lobes of the Insert. The Drive Ring is then fastened to the Ring Hub using high strength alloy steel socket head cap screws with high collar lock washers. The coupling will now transmit torque with silent, smooth reliable, maintenance free operation.

Manufacturing: T-Flex is manufactured in the USA. Standard hubs and rings are machined from solid carbon steel rounds and tubing, maintaining tight tolerances which provides excellent coupling balance. Stainless steels in grades 303, 304, and 316 are also available for corrosive environments and food applications. We also offer a low cost, alternative to stainless steel called Melonite Process which turns carbon steel black and prevents wear and corrosion. TFlex® inserts are made from durable custom compounded polyurethane that offer resistance to almost every fluid found in industry today. Using TFlex® ensures dependable, maintenance free torque transmission for your rotational equipment, and comes with product / technical support from our knowledgeable staff with over 25 years experience.

- Patented T-Flex® absorbs extreme torsional shock and vibration while accommodating angular, parallel, and axial misalignment without generating reactionary loads, which significantly increases bearing life.
- T-Flex® uniquely combines the stability of a compression type coupling with the safety of a shear coupling. In the event of a lockup, the insert will shear, minimizing the possibility of damaging your rotational equipment.
- No lubrication or routine maintenance is required.
- The rugged polyurethane insert is the only spare part and can be replaced in minutes without having to move the equipment or the shaft hubs.
- Standard inserts have a temperature range from -60° to 250° Fahrenheit with high temperature inserts available up to 350°.
- The inserts are available in a range of hardness to meet most torsional stiffness and torque requirements, and offers very high resistance to chemicals and weather.
- T-Flex® couplings are suitable for blind assembly, horizontal or vertical, reversing, and stop/start applications.
- The Compact size to torque ratio with generous bore capacity allows proper sizing.
- Hubs are available for use with tapered bushings, lock assemblies, shrink discs, finished bored and keyed, taper bored, and spline bored.
- Melonite Process available for enhanced corrosion and wear resistance. Low cost alternative to stainless steel.

- 1) Determine service factor (SF)
 $SF = F1 \times F2$ (not to exceed 4)

DRIVER F1	SF
ELECTRIC MOTOR	1.0
GAS OR STEAM TURBINE	1.0
GEAR BOX INCREASER / REDUCER	1.0
GAS OR DIESEL ENGINE 4+ CYL	3.0
GAS OR DIESEL ENGINE 1-3 CYL	4.0

- 2) Calculate required coupling continuous torque rating (lb-in) using the formula: $HP \times SF \times 63025 \div RPM = \text{Torque (lb-in)}$

DRIVEN F2	SF
GENERATORS, GEAR BOXES, LIGHT DUTY AGITATORS & CONVEYERS, STOKERS	1.0
CENTRIFUGAL PUMPS, COMPRESSORS, BLOWERS, FANS, ETC.	1.0
RECIPROCATING PUMPS, COMPRESSORS, FEEDERS, FREQUENT STOPS/STARTS, ETC.	2.0
PULP & PAPER MILL EQUIPMENT (REFER TO MILL STANDARD COUPLING SF GUIDE)	1-3
STEEL MILL EQUIPMENT (REFER TO MILL STANDARD COUPLING SF GUIDE)	1-3

- 3) Determine suitable coupling insert type for application using the Insert Color Chart below:

INSERT TYPE	DESCRIPTION	USE	MAX TEMP °F	MIN TEMP °F	DIUROMETER
YELLOW	GENERAL USE, HIGH DAMPEN	GENERAL APPLICATIONS (STANDARD)	250	-60	60D
RED	HIGH TEMPERATURE, HIGH DAMPEN	HIGH TEMPERATURE RUNNING APPLICATIONS	350	20	90A
ORANGE	HIGH TORQUE, MEDIUM DAMPEN	HIGH TORQUE, LOW SPEED APPLICATIONS	250	-20	70D
GREEN	EXTRA HIGH DAMPENING	ENGINE OR RECIPROCATING WITH HIGH VIBRATORY TORQUES	250	-20	90A

- 4) Choose the coupling size that meets or exceeds the calculated required continuous torque rating using the color coded tables below. Intermittent (peak) ratings are reserved for system torque spikes, starts/stops, reversing etc.

Insert Tables: Torque ratings (lb-in) - HP ratings @ various RPMs - Max RPM's based on insert types:

- 5) Determine coupling type required for the application. Check dimensions/max bore tables to confirm the coupling sized will accommodate shafts and physically fit the application. Determine if the couplings hubs will be bored to size, or used with Taper Lock Bushings, QD Bushings, or other type of locking device. Standard couplings are machined carbon steel. Specify if stainless steel or Melonite Process is required based on atmosphere conditions, etc.

Listed service factors are intended as a general guide, and are typical of usual service requirements. Please refer to AGMA 922-A96: Load Classification and Service Factors for Flexible Couplings for a complete list.

FIGURE 12
NON-SPACER

FIGURE 13
SPACER

Non-spacer couplings are easily converted to spacer couplings simply by adding the spacer body. All other components are standard. Spacer Length (SL) = DBSE - E to allow proper gap. See Table 2 for standard stocked spacer lengths.

FIGURE 15
HEAVY DUTY RING HUB

MB HD: Use the Heavy Duty Ring Hub for shafts larger than MB RH. RH HD must be specified when ordering RSB for the larger shafts. Available for use with Spacer and Non-spacer Couplings

FIGURE 14
LIMITED END FLOAT

Note: T-Flex standard couplings are designed to allow free axial movement of driver and driven shafts. Limited End Float couplings should be specified for all applications requiring limited or controlled axial end float such as Sleeve/Babbitt bearing motors, fans, blowers, etc. Consult factory for questionable applications. Limited End Float Flex Hub and Inserts are used with standard Ring Hubs and Drive Rings. Available for use with Spacer and Non-spacer Couplings.

ATR Sales Inc. reserves the right to change design without notice. The dimensions and weights listed are approximate and sufficient for most users. Dimensions L3 and L4 may be faced off as needed for length restrictions. (see page 12 for shaft contact) The purchaser should request certified prints for couplings requiring tighter tolerances, critical dimensions and/or weights. Contact ATR Sales @ 800-443-6613

Use Limited End Float Flex Hub and Inserts for applications with Sleeve Bearing Motors, ID & FD fans or any application requiring Limited Axial End Float. All Other components are standard, they can be used in Non-Spacer, Spacer, and Flywheel, etc.

Note: Limited End Float Couplings can be special ordered for End Float +/- increase or decrease and accommodate greater angular misalignment. They can also be combined with Axial Slide Couplings to be used as stops for < or > travel. Consult factory for special design needs.

SLIP FIT BORES = NOMINAL SHAFT DIAMETER +.001/+.002
SUPPLIED WITH STANDARD KEYWAY AND TWO SET SCREW (1 OVER KEYWAY & 1 @90°)

INTERFERENCE FIT BORES = NOMINAL SHAFT DIAMETER X .0005 = INTERFERENCE +/- .0005
SUPPLIED WITH STANDARD KEYWAY AND ONE SET SCREW OVER KEYWAY

ALL SPLINED AND TAPER BORES ARE AVAILABLE WITH EXTRA CHARGE & LEAD TIME
FACTORY DYNAMIC BALANCING IS AVAILABLE WITH EXTRA CHARGE & LEAD TIME

GAS OR DIESEL ENGINE 1-3 CYL	4.0

DRIVEN F2	SF
GENERATORS, GEAR BOXES, LIGHT DUTY AGITATORS & CONVEYERS, STOKERS	1.0
CENTRIFUGAL PUMPS, COMPRESSORS, BLOWERS, FANS, ETC.	1.0
RECIPROCATING PUMPS, COMPRESSORS, FEEDERS, FREQUENT STOPS/STARTS, ETC.	2.0
PULP & PAPER MILL EQUIPMENT (REFER TO MILL STANDARD COUPLING SF GUIDE)	1-3
STEEL MILL EQUIPMENT (REFER TO MILL STANDARD COUPLING SF GUIDE)	1-3

1) Determine service factor (SF)
SF = F1 X F2 (not to exceed 4)

2) Calculate required coupling continuous torque rating (lb-in)
using the formula: HP X SF X 63025 + RPM = Torque (lb-in)

3) Determine suitable coupling insert type for application using the Insert Color Chart below

INSERT TYPE	DESCRIPTION	USE	MAX TEMP °F	MIN TEMP °F	DIUROMETER
YELLOW	GENERAL USE, HIGH DAMPEN	GENERAL APPLICATIONS (STANDARD)	250	-60	60D
RED	HIGH TEMPERATURE, HIGH DAMPEN	HIGH TEMPERATURE RUNNING APPLICATIONS	350	20	90A
ORANGE	HIGH TORQUE, MEDIUM DAMPEN	HIGH TORQUE, LOW SPEED APPLICATIONS	250	-20	70D
BROWN	HIGH DAMPENING	HEAVY VIBRATION, SHOCK LOADS	250	-60	95A

4) Choose the coupling size that meets or exceeds the calculated required continuous torque rating using the color coded tables below.
Intermittent (peak) ratings are reserved for system torque spikes, starts/stops, reversing etc.

Insert Tables: Torque ratings (lb-in) - HP ratings @ various RPMs - Max RPMs based on insert types

5) Determine coupling type required for the application. Check dimensions/max bore tables to confirm the coupling sized will accommodate shafts and physically fit the application. Determine if the couplings hubs will be bored to size, or used with Taper Lock Bushings, QD Bushings, or other type of locking device. Standard couplings are machined carbon steel. Specify if stainless steel or Melonite Process is required based on atmosphere conditions, etc.

Listed service factors are intended as a general guide, and are typical of usual service requirements.
Please refer to AGMA 922-A96: Load Classification and Service Factors for Flexible Couplings for a complete list.

The purchaser should use certified prints for construction where exact dimensions and weights are critical. Additional information will be provided if extreme accuracy is required.

FIGURE 29
SPACER

NOTES:
 SPACER BODY (L) IS ORDERED BY DISTANCE BETWEEN SHAFT ENDS (DBSE)
 ** SPACER BODY IS SHORTENED BY THE "E" DIMENSION AT THE FACTORY
 *** STD. HUB SIDE SHAFT END IS INSTALLED SO THAT THE END OF SHAFT IS PERPENDICULAR WITH THE END OF THE WINGS ON THE HUB
 **** CAN BE ORDERED TO MEET ALL API STANDARDS 610 / 7TH EDITION

M-6 THRU M-12 - Refer to factory for availability of bushings not listed. Hubs can be machined for all types of locking devices, refer to factory.

*Dimensions and overall length of couplings will change with bushed hubs. If dimensions are critical please refer to factory.

Refer to horsepower capacity at various RPM on page 4 for Millennium® (100 RPM column), horsepower capacity at various RPM on page 10 for A-SERIES® (100 RPM column), and page 18 for high torque low RPM applications (100 RPM column).

(constant multiplier)

COUPLING SELECTION FORMULA:

METHOD:

Data needed to correctly select coupling size

- (1) H.P. of driver (N)
- (2) R.P.M. of driver (n)
- (3) Service coefficient (k)

(A) Use figures obtained from graph tables 18, 19 and 20 for determining "K"
 $K = F1 \times F2 \times F3$

- (4) Shaft and keyway size of driver and driven equipment.

$$100 \times K \times \frac{N}{n} = \text{Adjusted Horsepower}$$

EXAMPLE:

- Electric Motor - 50 H.P.
- RPM - 1750
- Driven equipment - centrifugal pump
- Working 24 hours per day
- Shaft - 17/8 x 21/4

$$K = F1 \times F2 \times F3 \text{ or } 1.3 \times 1.0 \times 1.0 = (1.3)$$

$100 \times 1.3 \times 1750 = 3.71 \text{ H.P.} = \text{Adjusted Horsepower}$ - go to TABLE 2 for Millennium® & TABLE 8 for A-SERIES®,* always use RPM (100) column and follow down to Continuous Horsepower equal to or greater than Adjusted Horsepower (3.71). Select size A-3 or M-2.

Stone grinders, slow beaters, sheet metal press cutters, pumps and piston compressors without fly-wheel and excavators.

Fast stone grinders, metal brushes, drilling machines, mixing machines, driers, pumps and compressors with fly-wheel.

Trashers, machine tools working uneven directions, shakers, elevators and conveyors.

Machine tools, pumps, centrifugals, ventilators expel - airs.

Diesel or gas engine with 1 and 3 cylinders.

Diesel or gas engine with 4 or more cylinders.

Electric motor with high starting torque.

Electric motor with normal transmission or turbine.

(1) RADIAL/PARALLEL

THE FREE MOVEMENT OF THE ATRA-FLEX INSERT ACCOMMODATES PARALLEL MISALIGNMENT, AND STILL MAINTAIN FULL SHOCK AND VIBRATION DAMPING.

(2) ANGULAR

ATRA-FLEX INSERT ALLOWS THE ROCKING AND SLIDING ACTION OF THE HUBS UNDER AN ANGULAR MISALIGNMENT, WITHOUT ANY LOSS OF POWER THROUGH THE RESILIENT ADIPRENE INSERT.

(3) AXIAL

ATRA-FLEX INSERT ALLOWS UNRESTRAINED END FLOAT FOR BOTH DRIVING AND DRIVEN MEMBERS.

NOTE: ALIGNMENT !!

A FLEXIBLE COUPLING IS NOT DESIGNED TO COMPENSATE FOR EXCESSIVE MISALIGNMENT. ITS PURPOSE IS TO PERMIT SLIGHT MOVEMENT OF PUMP OR DRIVER SHAFTS OR ANY DRIVEN EQUIPMENT WHILE TRANSMITTING POWER. EXCESS MISALIGNMENT CAN CAUSE SHORT COUPLING LIFE DUE TO SLIDING AND WORKING ACTION OF COUPLING CONNECTORS. MODERN MACHINERY OPERATES AT EVER INCREASING SPEEDS; EVEN MINOR ALIGNMENT ERRORS LEAD TO HIGH VIBRATION ON BEARING LOADS RESULTING IN MACHINERY DAMAGE AND PRODUCTION DOWNTIME.

ATRA-FLEX® SOLVES:

MISALIGNMENT PROBLEMS BY A "FAIL SAFE" METHOD. IF YOU SHOULD EXCEED OUR ALIGNMENT TOLERANCES (WHICH IS THE MAXIMUM YOUR EQUIPMENT SHOULD BE SUBJECTED TO WITHOUT SUBSTANTIAL LOSS OF EQUIPMENT LIFE) THE RING WILL WALK OFF THE INSERT TO PHYSICALLY INDICATE A GROSS MISALIGNMENT. CORRECT THE MISALIGNMENT AND THE RING WILL STAY IN PLACE. AT THAT TIME, YOU HAVE GUARANTEED YOURSELF MAXIMUM LIFE OUT OF YOUR ROTATIONAL EQUIPMENT WHICH EQUALS = \$\$\$\$ DOLLARS \$\$\$\$ SAVED!!!

CORPORATE HEADQUARTERS

ATR SALES, INC.

**110 E. GARRY AVE
SANTA ANA, CA 92707
PH: 800.443.6613 / FAX: 800.988.9896**

Distributed throughout the World
