

Tsubaki Advantage Success Story

Application No.:	8269
Industry:	FORESTRY-Forestry
Application Name:	Infeed to Sorter Chains
Issue:	Two identical inclined infeed conveyors that were previously supplied by CAM (C2080HSK210L) was lasting only two years before attachments became uneven with chain stretch, causing timing issues with the entry to the Sorter.
Tsubaki Solution:	The CAM chain was replaced in July 2019 with Tsubaki Premium C2080HSK210L440PMT, which was matched and tagged for greater accuracy. Matching and Tagging sets of chain reduce initial relative length differences to a minimum. This ensures that chains elongate from a common starting point and reduces uneven wear.
Cost Saving:	\$1815.09 as of 2022-02-15 and counting.
Product Type:	Attachment Chain / Matched & Tagged Pairs
