

Tsubaki Advantage Success Stories

Application No.	8529
Industry	FORESTRY-OSB or Timberstrand
Application Name	Wet Bin Drive Chain
Issue	High Torque created by increasing the capacity of the wet bins continuously subjects the drive chain to loads higher than its maximum allowable load. Space restrictions also prevent the drive from being upgraded to a multi strand chain.
Tsubaki Solution	Super H chain has a 60% increase in working load over its standard ANSI equivalent thus allowing it to better handle the extra load applied to it, in this case it still does not meet the maximum allowable load required but will extend the life of the chain and remain the desired failure point of the system.
Cost Savings	1,400
Product Type	Heavy Duty Drive Chain-HEAVY Series
